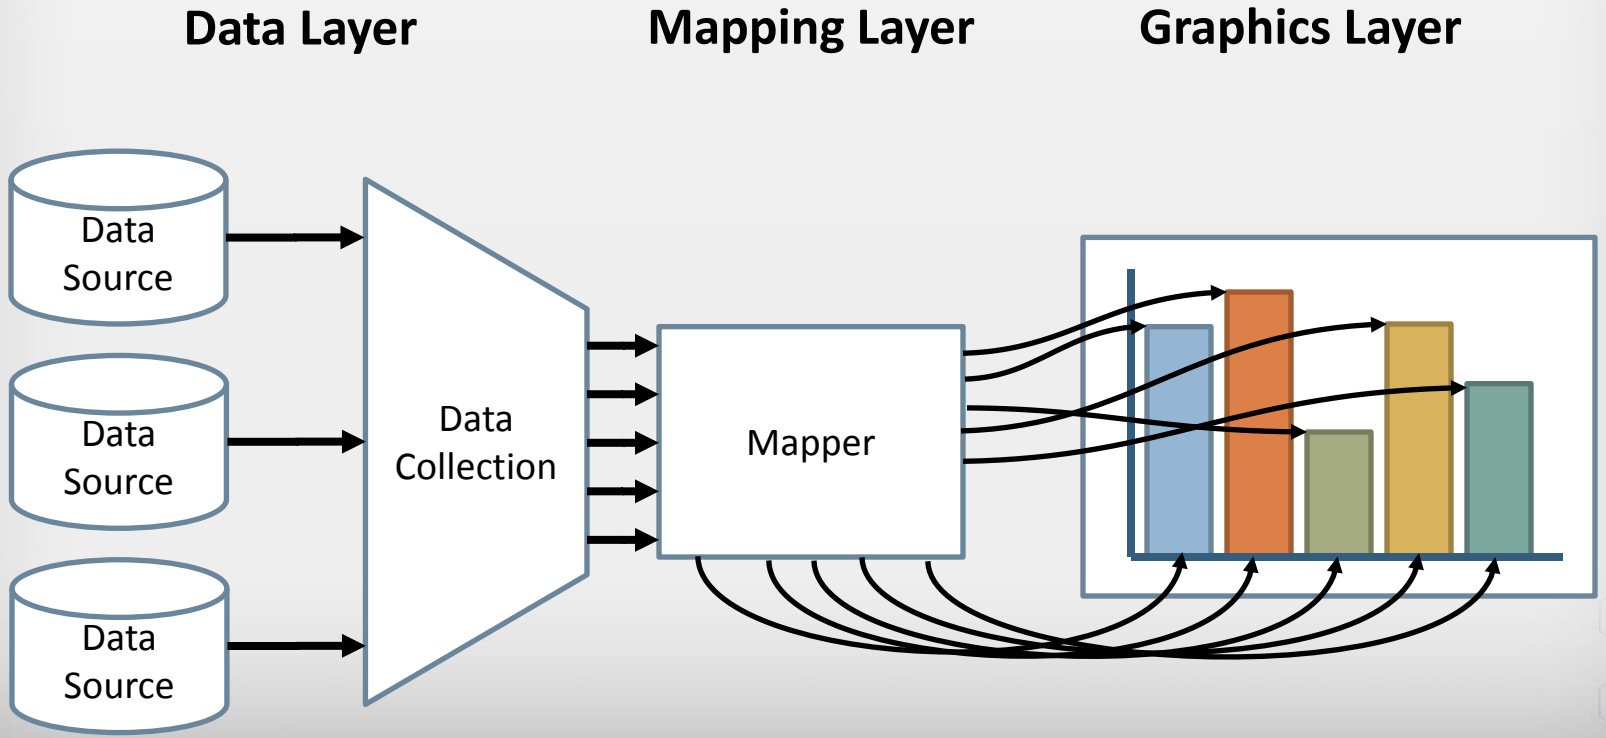
University of Illinois at Urbana-Champaign

Data Visualization Framework



Data Layer	Mapping Layer	Graphics Layer
• Locating and obtaining data • Importing data in proper format • Relating data for proper correspondence • Data analysis and aggregation	• Associating appropriate geometry with corresponding data channels • Data analysis and algorithms (e.g. contouring)	• Conversion of geometry into displayable image • Decorations • Managing interaction

Data Types

	Discrete (no between values)	**Continuous** (values between)
Ordered (values are comparable)	**Ordinal,** e.g. size: S,M,L,XL,… **Quantitative,** e.g. counts: 1,2,3,…	**Fields,** e.g. altitude, temperature
Unordered (values not comparable)	**Nominal,** e.g. shape: ☐○△ **Categories,** e.g. nationality	**Cyclic values,** e.g. directions, hues

Mapping Quantitative Values

- Position
- Length
- Angle/Slope
- Area
- Volume
- Color/Density

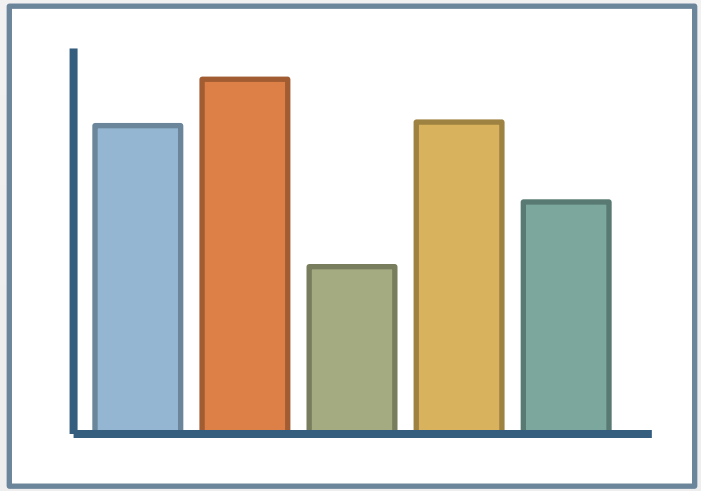
Bar Chart

Quantitative dependent variable

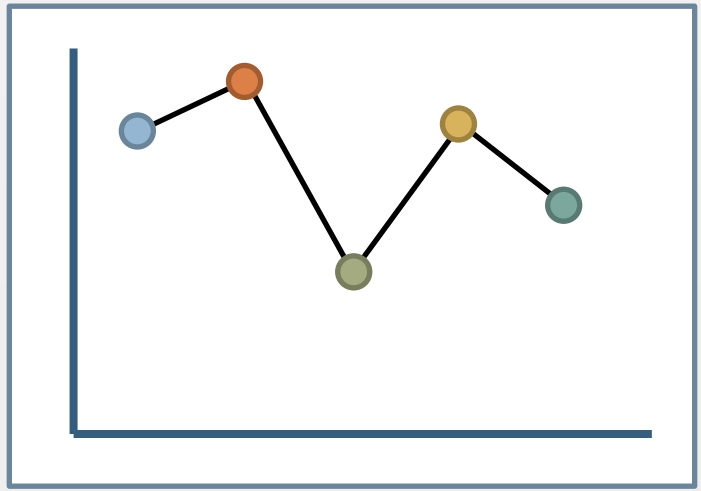


Discrete/nominal independent variable

Benefits from both position (top of bar) and length (size of bar)

Line Chart

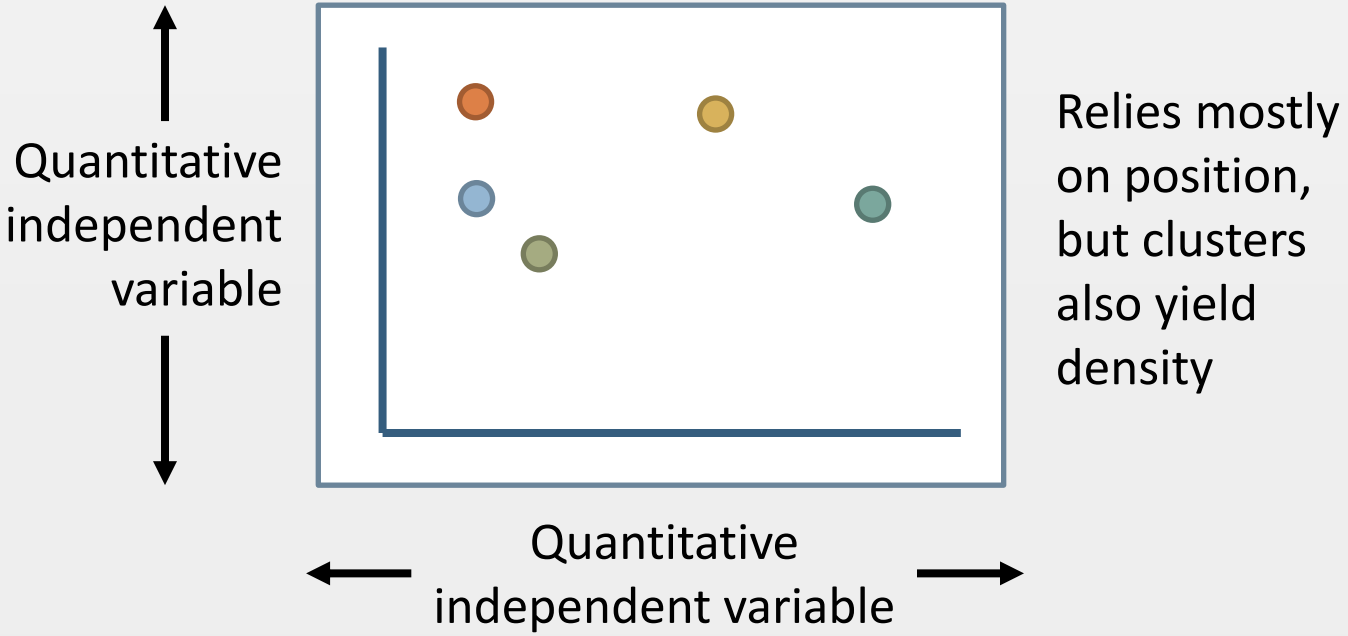
Quantitative continuous dependent variable



Quantitative continuous independent variable

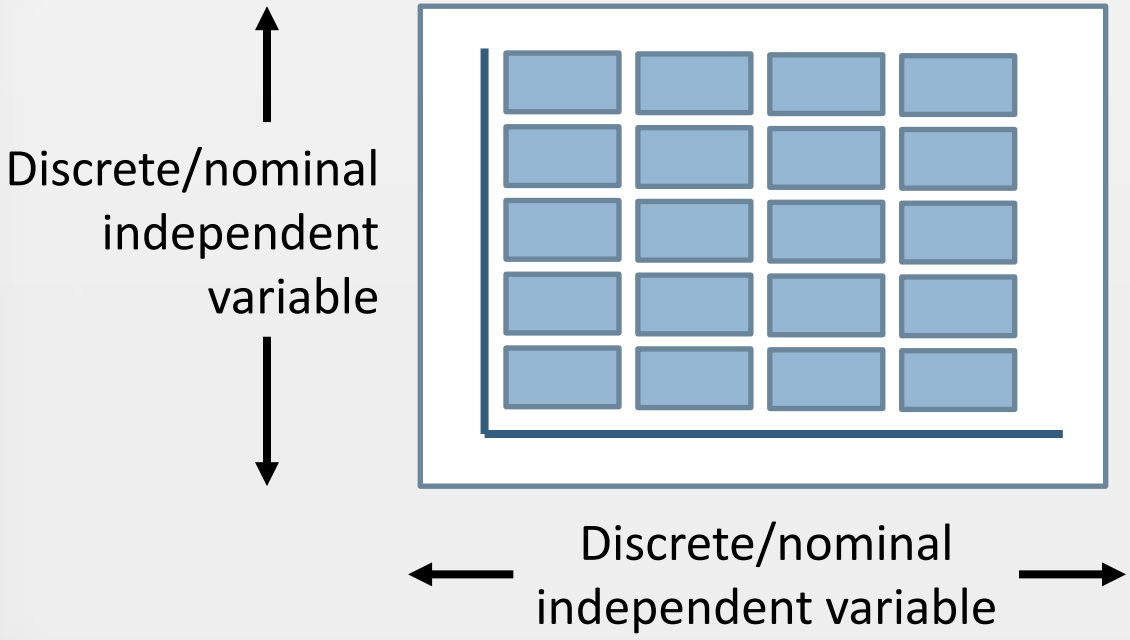
Benefits from position but not length

Scatter Plot



Relies mostly on position, but clusters also yield density

Table



Benefits from position only

(notice the lateral inhibition flashing?)

What to Use?

Dep.	Quantitative Continuous	Bar	Line
	Quantitative Discrete	Bar	Bar
Ind.	Quantitative Continuous	Gantt	Scatter
	Nominal or Q. Discrete	Table	Gantt
		Nominal or Q. Discrete	Quantitative Continuous
		Independent
